INTRODUCTION

Logistics operations involve cumbersome documentation, planning, and manhours. There are numerous challenges to manually create schedules, delivery routes, preparing invoices, bills, and reports for each transaction that takes place. Additionally, manual procedures can never guarantee smooth and error-free operations, this is where Endel Digital brings you the ideal solution. Endel Digital's Cargo Collection Mobile App is designed to help you track your operations with ease. Our mobile application helps you map the complete process in real-time, from task assignment, to scheduling, to weights and measurements of cargo packages, to invoice generation, and notifications and reporting.

Agile Operations

Our application allows for dynamic scheduling, clear approval workflow and real-time notification alerts, ensuring that your operations never slow down.

Improved efficiency

Automatic scheduling, invoice and report generation helps your team to save time, and boost efficiency

There is complete transparency of all types of data- the schedule of each delivery person, the weight and specifications of each cargo package, and the billing details and invoice, in real-time.

Data transparency

We have engineered a seamless UI which ensures that persons of all skill sets, & experience can use the application with ease. The workflow & UI simplifies the scheduling & documentation process throughout the complete cargo collection operations.

Ease of operations

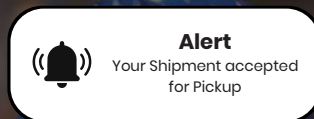

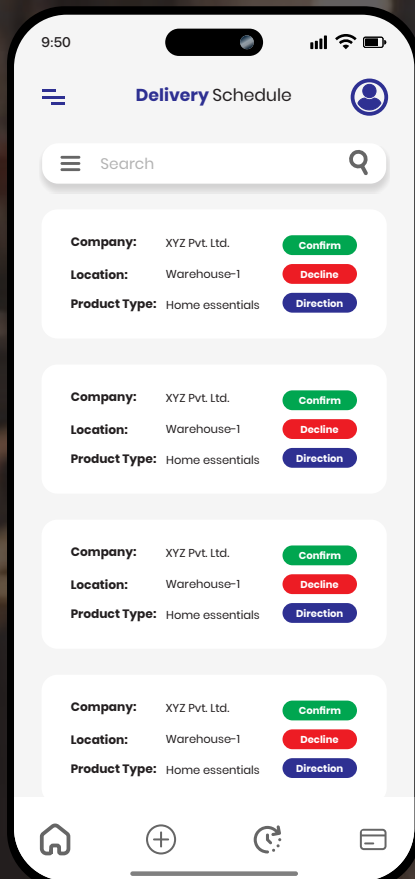

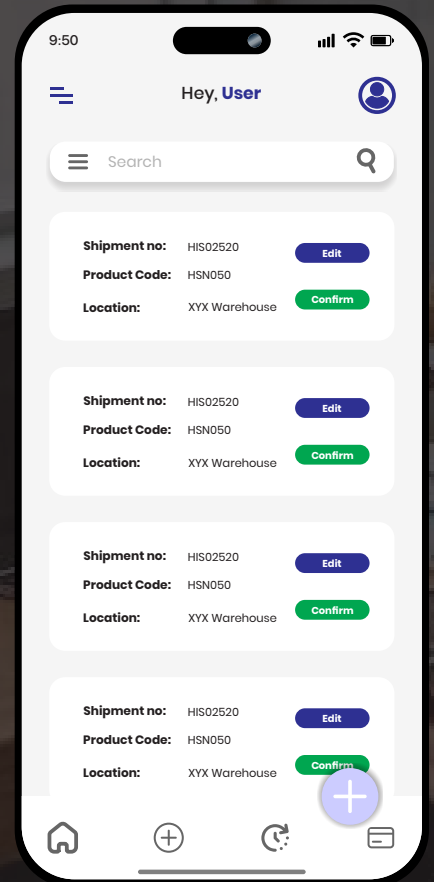

**ENDEL
DIGITAL**

Step 1- Assignment

Manager can access the list of all the deliveries and pick-ups that are to be scheduled for the day, he can assign deliveries and pick-ups to different team members, as per their locations. Automated email or SMS notifications are sent to the delivery drivers, to inform them of their assigned tasks for the day

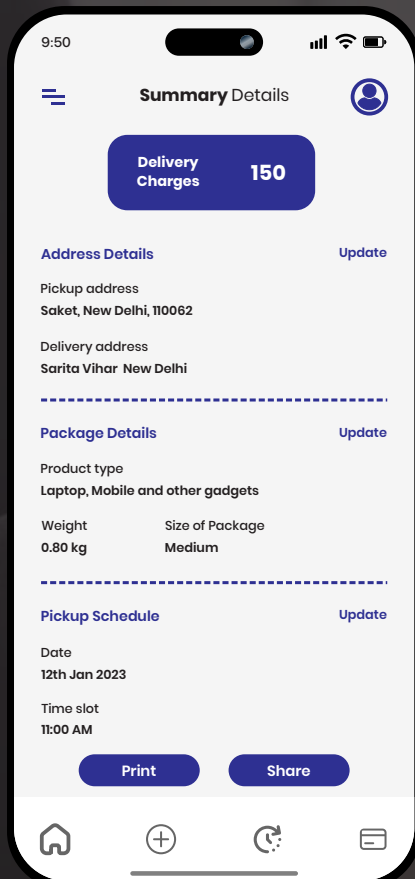

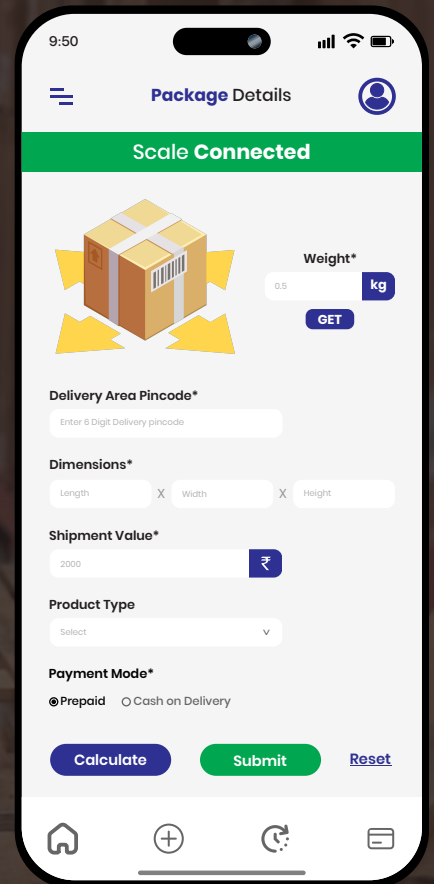

Step 2- Scheduling

The delivery drivers can access their schedule for the day on the app, they can approve or reject (with a written reason) every scheduled delivery or pick-up. Based on which their schedule is decided, and a delivery route is devised. The manager is notified of the same, where he can once again reassign the rejected tasks to someone else.

Step 3- Weighment

The delivery driver will go for the pick-up with a Bluetooth weighing scale, where the weighment data of the package will be automatically fetched from the scale, moreover, the driver must enter the dimensions of the package into the app. Additionally, he would mandatorily have to take a photo of the package. The weight data is sent to the manager for verification and validation.

Step 4- Billing

Based on the dimensions and the weight, the app will automatically calculate the invoicing value, and generate the invoice, and bill. The manager will be notified of the same, and the bill can be automatically sent to the customer via SMS or E-mail.

FEATURE

Direct Bluetooth integration

The app directly connects to the weighing scale for direct capturing of weight

Real-time updates

Mobile app gives direct notifications via SMS or e-mail

User role access

Unique user roles reduce the chances of any sort of data leakage or misuse of information.

Scheduling management

Clear and straightforward scheduling for deliveries

Invoice and bill generation

The invoice and bills are automatically generated, saving time and efforts
